EDUCATION

University of Florida - Master of Science, **Computer Science** **May 2023**
University of Mumbai - Bachelor of Engineering, in **Computer Engineering** **May 2017**
Relevant Coursework - Distributed Systems, Cloud Computing, Software Engineering, Data Structures & Algorithms, Human-Computer Interaction

WORK EXPERIENCE

Remora | *Back End Developer* | *United States* **July 2023 - Dec 2025**

- Designed and integrated Elasticsearch-driven search and recommendation pipelines into Java backend services, utilizing vector search to improve query relevance and user engagement by 25%.
- **Architected, deployed scalable RESTful APIs** and **distributed systems** using **Java 17/21, Spring Boot, Hibernate, Kafka, MySQL, and AWS** Cloud infrastructure to power dynamic **React SPA** improving system performance and reliability by 30%
- Built scalable **microservices** architecture with **Spring Cloud** and **asynchronous programming patterns (JMS)** to optimize cross device synchronization, data consistency and state synchronization for **React UI**.
- Developed **asynchronous backend schedulers** leveraging **Spring Batch** distributed architecture principles, ensuring 99.9% uptime for enterprise clients
- Collaborated cross-functionally with front-end, data science, and product teams to integrate **ML-powered** features and **AI-driven** workflows into production systems using **Spring AI** and **micro service** orchestration using **Kubernetes (K8s)**.
- Mentored junior developers on best practices focusing on **Spring Security, Test-Driven Development (JUnit/Mockito)** for code quality

Sonos | *SDE Intern* | *United States* **June 2022 - August 2022**

- Designed and implemented real-time distributed tracking systems using **Spring Boot**, **Spring JPA**, and **ReactJS**, improving event visibility by **90%**.
- Leveraged **asynchronous programming and schedulers** to optimize cross-device synchronization.
- Achieved **90% code coverage** using **TDD (JUnit, Mockito)**, strengthening system reliability.

Itiviti | *Full Stack Engineer* | India **October 2020 - July 2021**

- **Architected high-throughput microservices** using **Java 8/11** and **Spring Boot**, implementing custom serialization and efficient memory management to improve data throughput by 20%.
- **Developed enterprise-grade RESTful APIs** with **Spring WebFlux** for non-blocking I/O, facilitating real-time financial data streaming for high-frequency trading clients.
- **Optimized persistence layers** by designing complex **MongoDB** aggregation pipelines and implementing **LRU caching in Java**, reducing log-scheduler query latency by 7%.
- **Maintained 95%+ unit test coverage** using **JUnit and Mockito**, ensuring the stability of critical financial transaction modules.

QualityKiosk Technologies Private Limited | *Software Developer* | India **July 2019 – February 2020**

- **Engineered scalable Spring Boot microservices** integrated with **ElasticSearch** for sub-second search performance to query across **1.5 Terabytes** of analytical data.
- **Implemented robust security protocols** using **Spring Security (OAuth2/JWT)** to protect analytical dashboards and sensitive client data.
- **Automated CI/CD backend workflows** using **Maven and Jenkins**, streamlining the Java build process and reducing manual deployment overhead by 15%.
- **Built reactive analytical dashboards** in AngularJS, bridging the gap between high-performance Java backends and intuitive user interfaces for operational reporting.

PROJECTS

Enterprise RAG & LLM Fine-Tuning Engine | Python, PyTorch, Java, Spring Boot

- Architected a scalable enterprise AI platform combining custom PyTorch LLM and RAG pipelines deployed via high-throughput Spring Boot microservices.

Twitter Clone | F# / REST APIs

- Built a distributed social system using the Actor Model and REST APIs; verified fault tolerance through integration tests.

Compiler | Java, JUnit

- Developed a lexer, compiler, Abstract Syntax Tree, Type Check Visitor, and Bytecode Generator using Java and test cases using JUnit .

Inventory Management | Java, Microservices, REST, LRU Caching

- Developed a fault-tolerant inventory system using microservices and node replication to improve latency and handle node failures.

SKILLS

Languages: Java, Python, PHP, JavaScript, TypeScript, SQL, Scala, JUnit, Mockito.

AI & Machine Learning: RAG (Retrieval-Augmented Generation), Claude Code, Cursor, Github Copilot.

Frameworks: Spring Boot, Spring JPA, Hibernate, Laravel, React, Node.js, Angular, Kafka, RabbitMQ, Spark, Distributed Systems, Microservices, System Design, CI/CD, Maven, Gradle, Redis.

Databases: MySQL, PostgreSQL, MongoDB, Cassandra, Elasticsearch

Cloud & DevOps: AWS (S3, SQS, Lambda), Docker, Kubernetes, Jenkins, Git, Nginx.
